# MADC修正前(TopLevel\_20200317.bit)

## 時間軸拡大した別ショット

TopLevel\_20200319.bit によるテスト @2020年3月20日

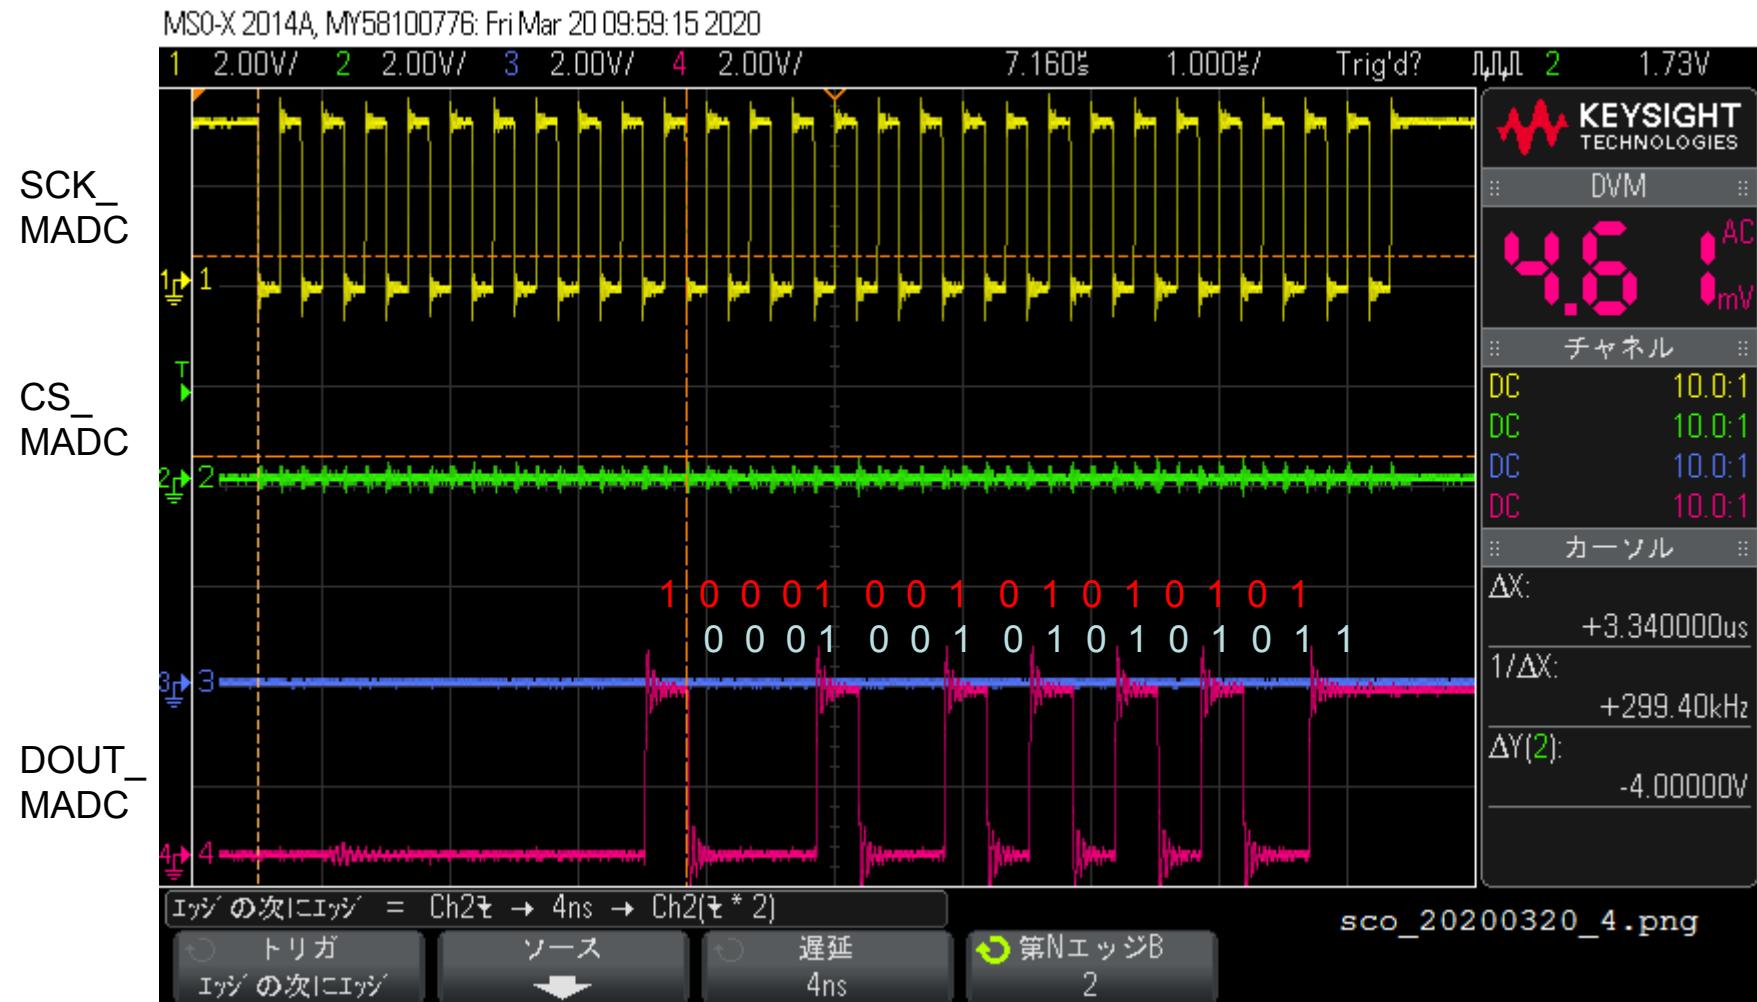

MADC修正したが、このファームにはまだバグがある：

■read動作でのデータの受信タイミングが1クロック早すぎる

read operation in the statusHV command, extHV=10.0V

readDAC=35157.0 Bias Voltage >> 73.16V

35157=0x8955 : failed to read

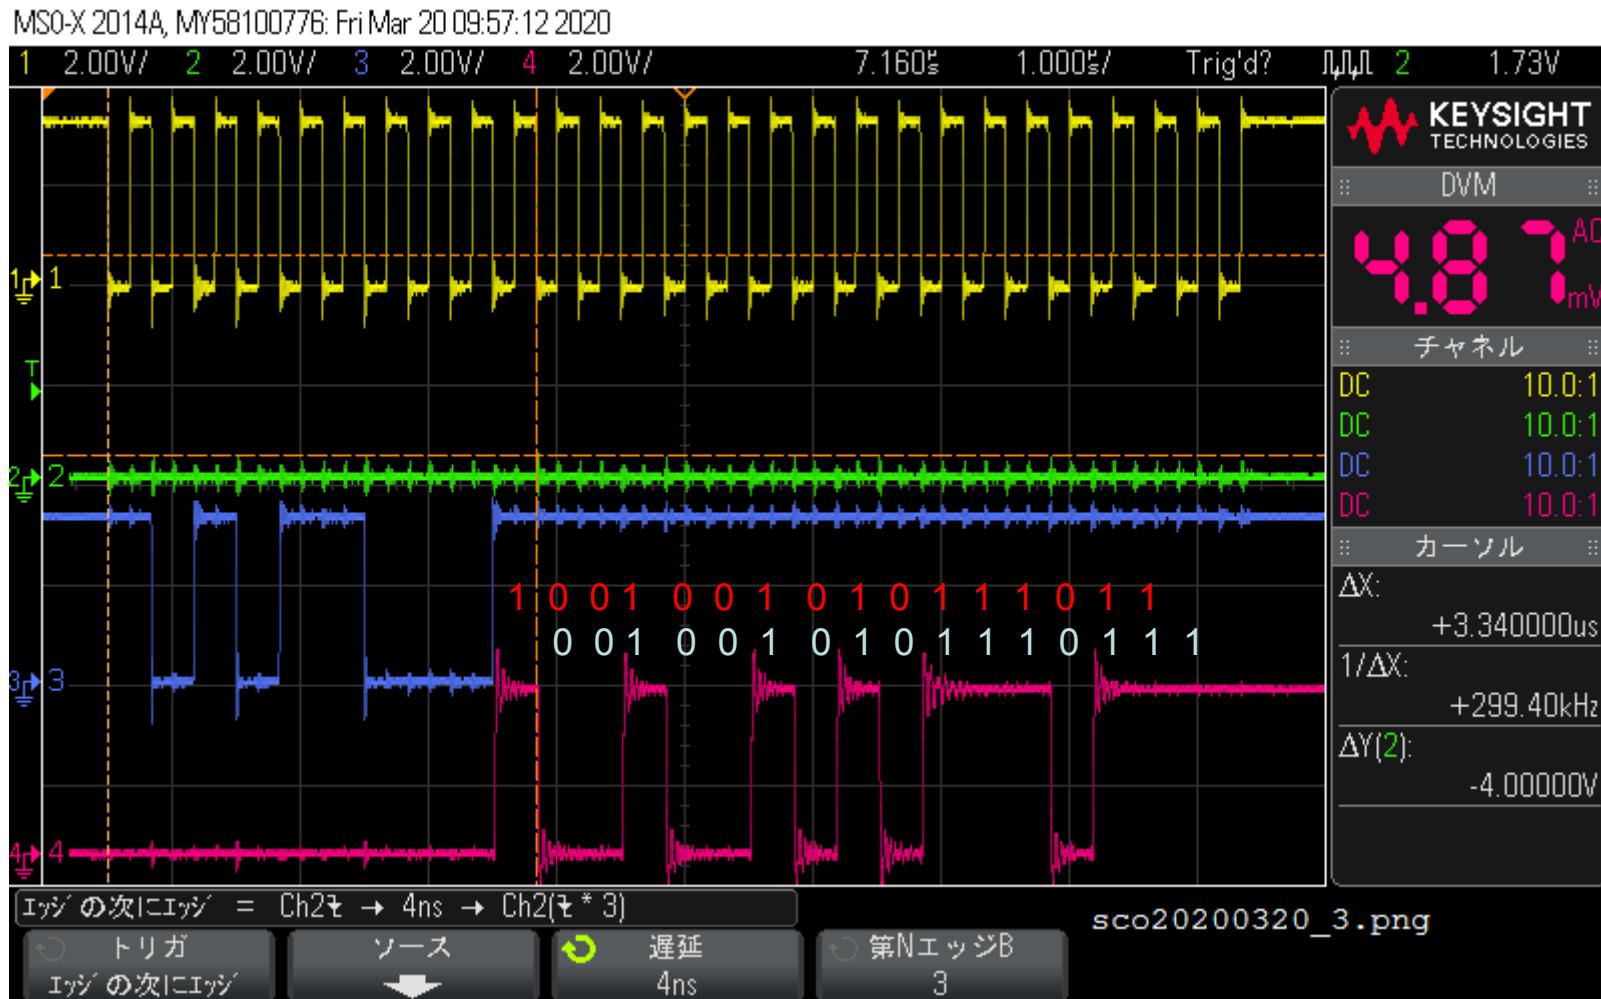

$$10.0V \rightarrow 2^{16} \times (10.0 \times 0.033)/4.5 = 4,806 \text{ expected, } 0x12Ab = 4779$$

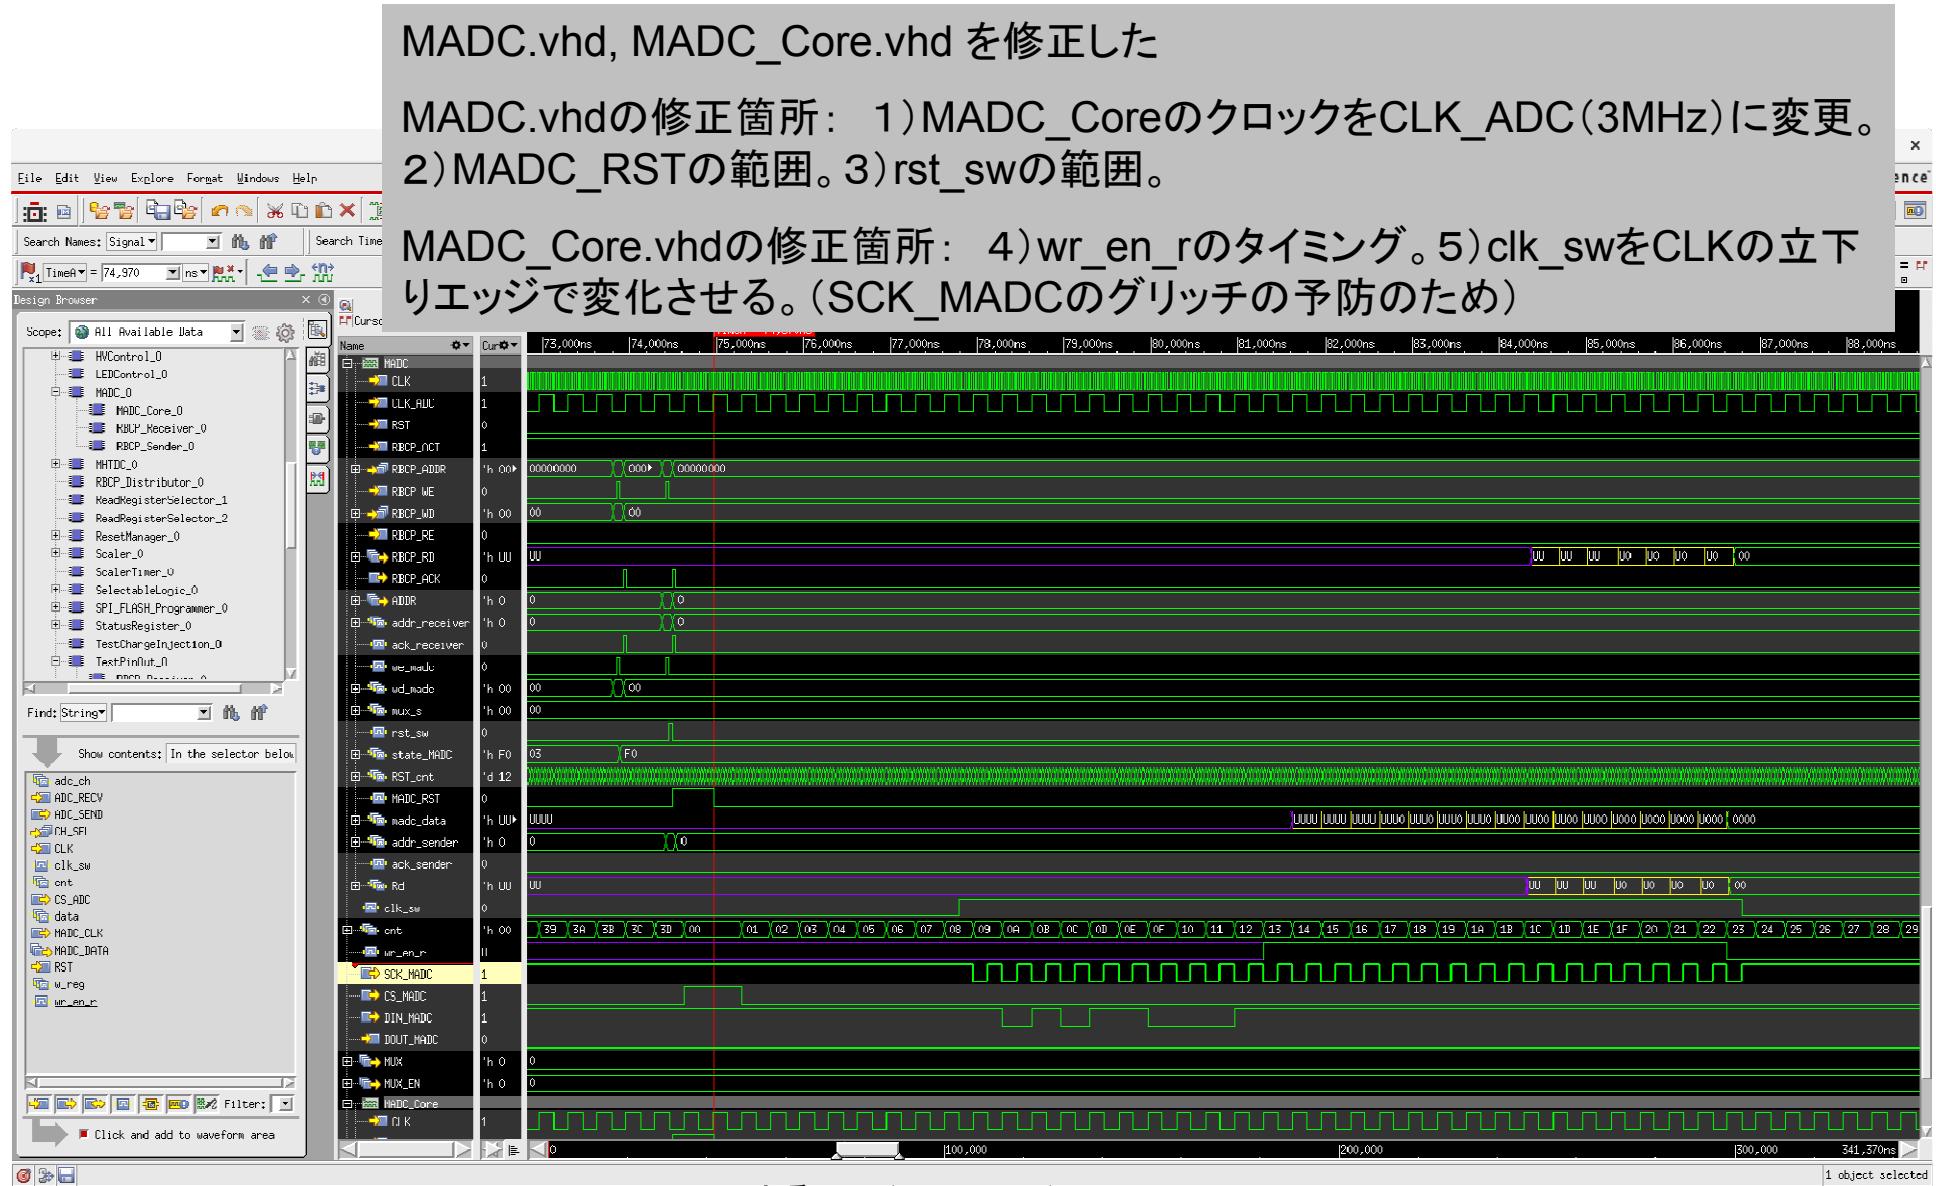

read operation in the statusHV command, extHV=20.0V

readDAC=37563.0 Bias Voltage >> 78.17V

37563=0x92BB

# TopLevel\_20200321.bit によるテスト @2020年3月21日

XceliumによるRTLシミュレーション

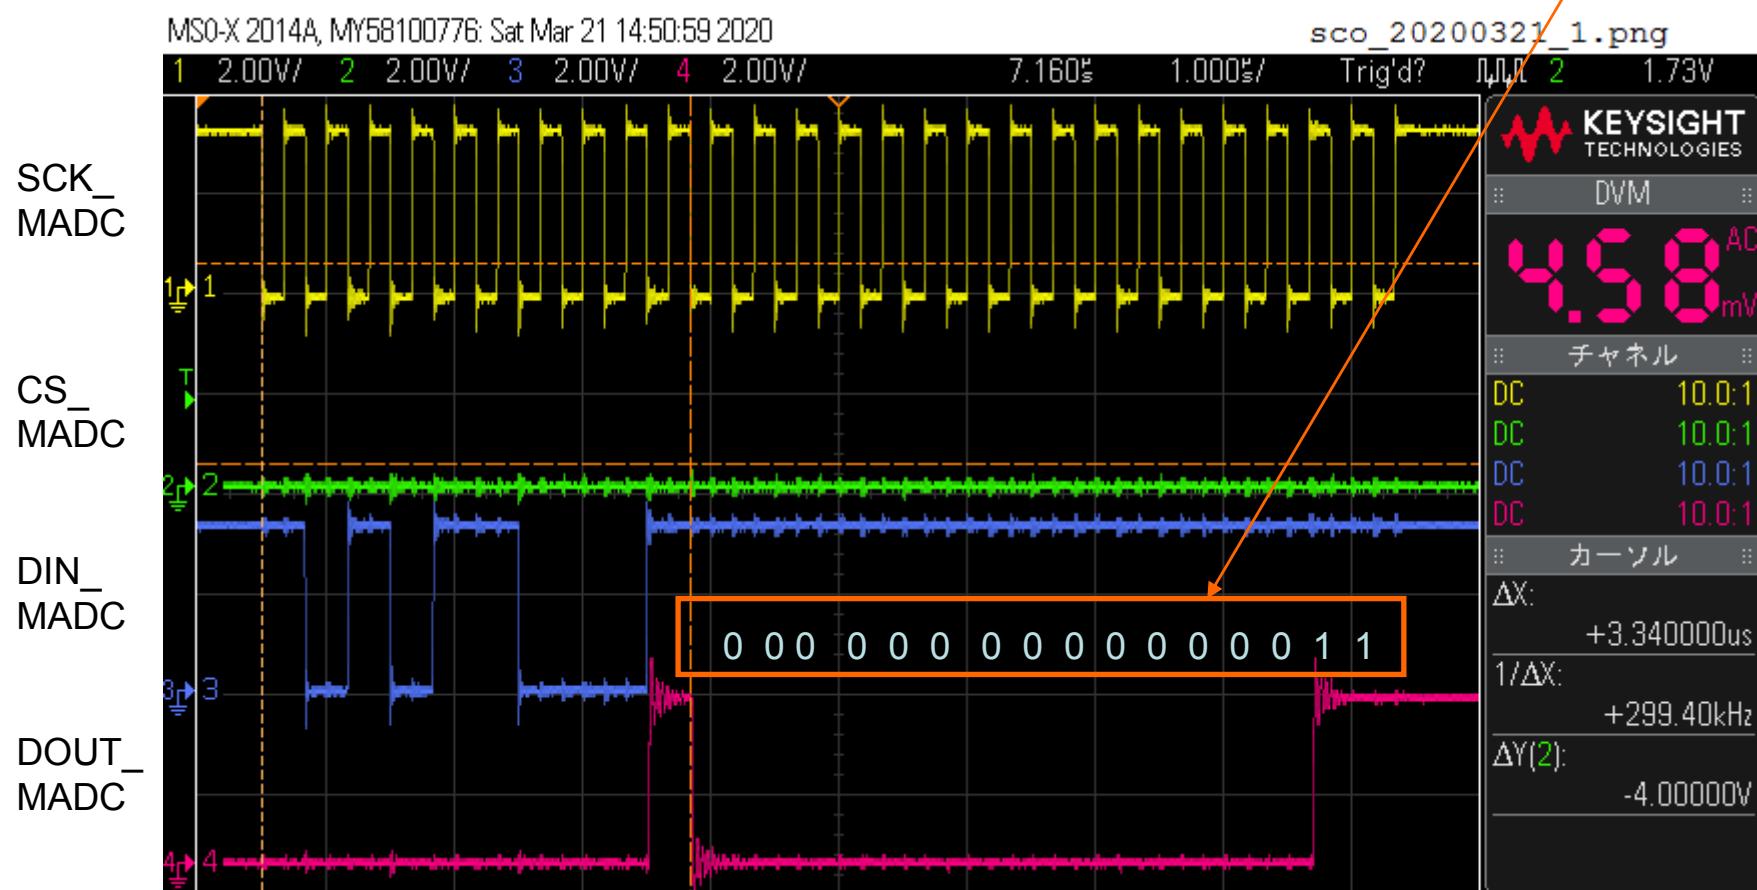

read operation in the statusHV command, extHV=0.0V

readDAC=3.0

Bias Voltage >> 0.04V

(3=0x0003)

一致

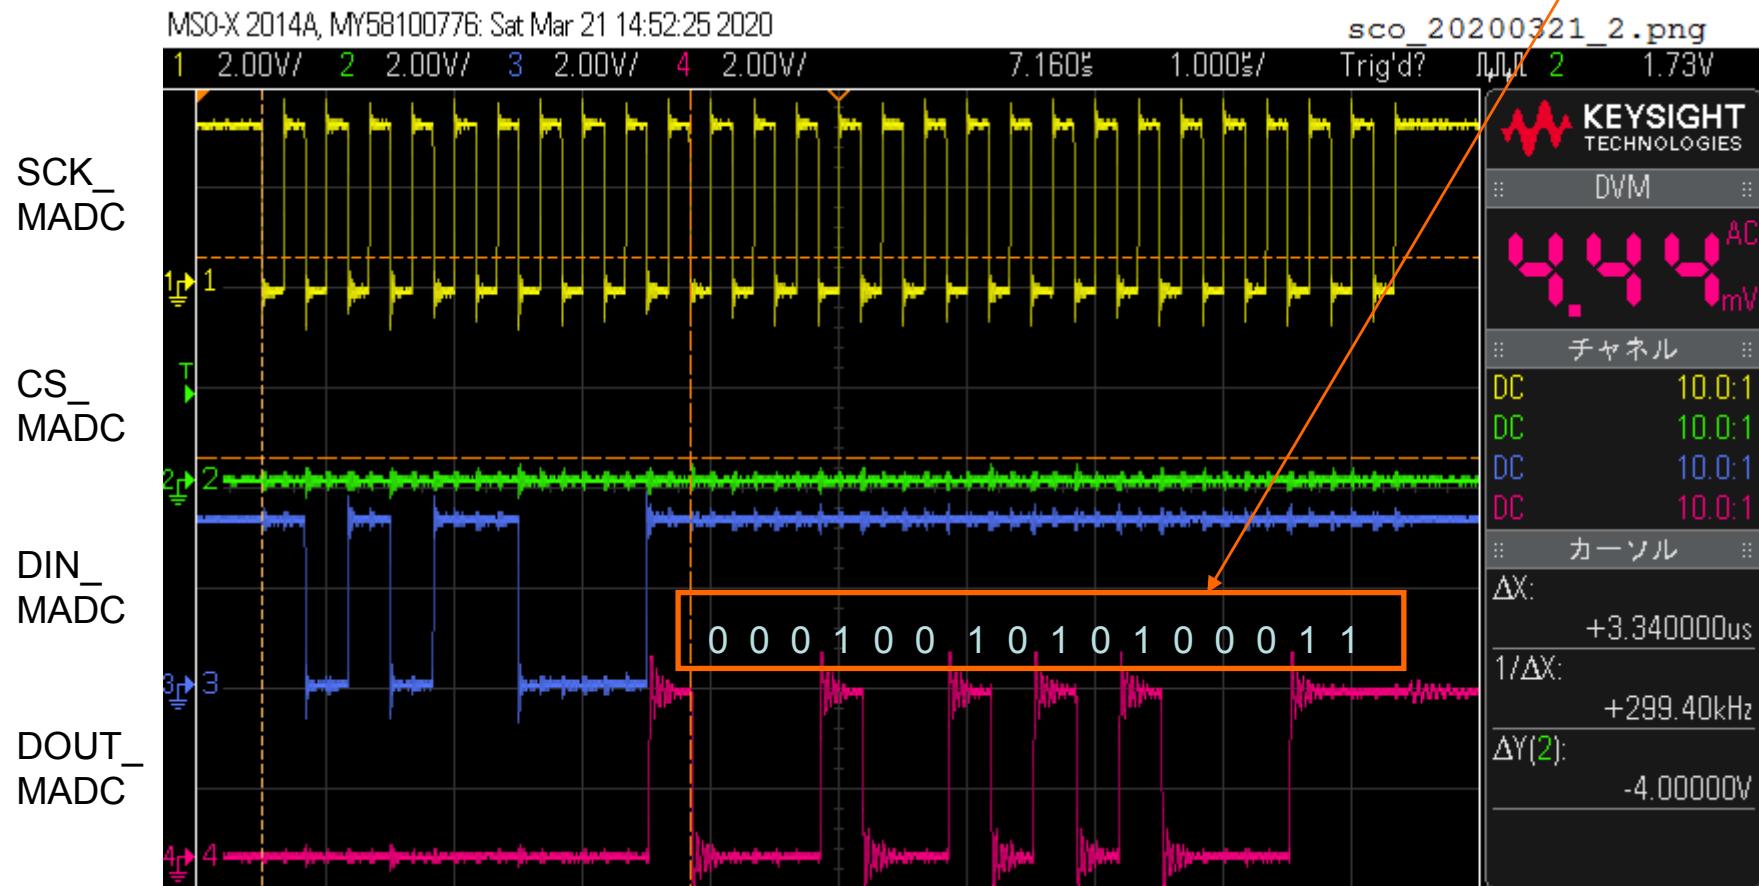

read operation in the statusHV command, extHV=10.0V

readDAC=4771.0 Bias Voltage >> 9.96V

(4771=0x12A3)

一致

read operation in the statusHV command, extHV=15.0V

readDAC=7163.0 Bias Voltage >> 14.93V

(7163=0x1BFB)

一致
